

LOGIN and REGISTRATION

- Methodology
- Using the waterfall model
 - By first sketching the wireframes then creating the html pages.
 - Secondly, adding functionality using Java script scripts and CSS style design
 - Lastly, verifying if a student, faculty can mark attendance.
- Concept decision
 - It is a clear, structural approach to solving the problem by first creating the skeleton then adding the flesh.
 - We are also able to clearly track the which part might be causing error.
- Requirements
 - the system should allow 3 types of users, students, faculty and admin
 - Faculty can create class sessions
 - Faculty can modify students' attendance (either present or absent)
 - Admin can manage all users
- Learning goals
 - Learn how to authenticate users
 - How to collaborate on Git hub
 - Upload to server
 - Apply functionality features using Java script on web pages
 - Link website to database, to store user data
